

Employment Highlights

David Evans and Associates Inc. August 2012 to Present

eLearning Developer

I currently collaborate with CH2M HILL's Human Resources and Organizational Development team to create online learning modules. My main contributions have included layout of lessons based on direction from the Instructional Design Lead; scripting for web/mobile and LMS applications; and UI/UX wireframe designs for internal CH2 websites.

FlightSafety Services Inc. September 2007 to March 2012*

Multimedia Graphic Artist

FlightSafety Services provides courseware, instructor, and simulator training for the U.S. Military. I was a member of a four-person graphics team that created interactive animations, technical illustrations, photography and 3D models for computer-based training. My responsibilities also included advertising, proposal covers and intranet development as requested by internal customers. I was proud of my ability to provide technically accurate illustrations, quickly accommodated art requests, and a polished presentation of FlightSafety's corporate brand.

* Includes a 3 month break in service between contracts.

Friends of Dinosaur Ridge December 2006 to August 2009

Freelance Graphic Designer

In 2007 I helped Dinosaur Ridge develop large-format graphics for their new exhibit, "Trek Through Time". After the grand opening of the museum in 2009, I continued to assist them with small advertising projects such as new logos, a souvenir postcard and a brochure.

Universal Products Inc. May 2005 to October 2006

Creative Artist

I was one of six artists whose designs culminated in sales averaging nine hundred thousand (\$900,000) dollars per month. Based on customer specifications, I created custom, large-format graphics for wakeboard boats, luxury cruisers, and automotive dealerships. Satisfied clients included Mastercraft, Malibu, Larson Cruisers, Sea Ray and Baja Boats.

Technical and Professional Skills

- Strong interpersonal skills. I work well on a team
- A talent for drawing to communicate ideas and enhance the design process
- Inventive solutions to uncommon challenges
- Good judgement when evaluating tools and processes
- Scientific and mechanical aptitudes
